

Software Validation in the Cloud

Optimize Risk Management & Compliance with Validify

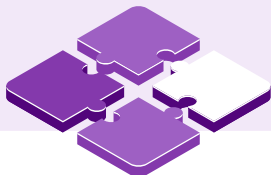

Paper-based computer software validation (CSV) is still used in many regulated industries, but it's a dated, time-consuming, and error-prone process.

Validify's cloud-based platform is changing the CSV paradigm, eliminating these pain points by optimizing and accelerating the validation process. You can use Validify to proactively manage risks, generate and update validation documents, and stay compliant at all times.

Say goodbye to
**long waits and
manual processes.**

With Validify, risk
analysis and
validation are **quick
and easy.**

We deliver:

- **Flexibility:** Manage any computerized system's risks and required validation documents.
- **Error-proof reliability:** Focus on more complex work. Let Validify bring accuracy and consistency to monotonous, error-prone tasks and reduce compliance risks.
- **Risk mitigation:** Quickly identify trends and any IT risks across your organization.
- **Continuous validation:** Ensure your system is constantly in a validated state.
- **Safety:** Securely store all your risk assessments and validation documents in one place.
- **Shorter cycle times:** Avoid over testing and speed up cycle times by implementing a risk-based approach.
